Kaseya Cyber Insurance
Fast Track Program - USA

Kaseya Cyber Insurance Fast Track

Certified by Cysurance

The Kaseya Cyber Insurance Fast Track Program offers streamlined access to financial protection, combining warranty benefits with exclusive cyber insurance options. Cysurance provides the first line of response—covering remediation costs and offering access to high-limit cyber insurance at discounted rates.

Recovery Benefits

Certification Warranty

Cysurance certifies the Kaseya Security Stack and provides up to **\$500,000** dollars in first-line response for defined recovery expenses—if the security stack and/or warranty controls are circumvented.

Key Features

- First-line response for recovery expenses
- Reacts to one valid breach event per year
- Includes expenses for ransomware & BEC incident costs
- Related expense for compliance fines, legal & income loss
- Recovery expenses can be transferred to cover cyber insurance deductible fees

Recovery Expenses Breakdown

Ransomware & BEC Incident	\$100,000
Compliance Penalties & Fines	\$100,000
Cyber Legal Liability	\$250,000
Business Income Loss	\$50,000

Note: Recovery expenses can be transferred to cover cyber insurance deductible fees.

CERTIFICATION
WARRANTY

Cyber Insurance

The certification warranty is required for customers to qualify for streamlined access to exclusive cyber insurance policies, which offer flexible coverage limits and discounted premiums.

Insurance offered by Cysurance, LLC. Delaware License 3000712359. This communication contains product summaries only. Coverage is subject to the language of the insurance policy issued.

Certification Warranty Controls

The certification warranty provides up to \$500,000 toward recovery expenses resulting from a ransomware or business email compromise (BEC) event and includes associated costs for compliance penalties, legal liability, and business income loss due to downtime.

For the validity of the certification warranty the following security controls are required:

1 Multi-Factor Authentication (MFA) enabled for all Email Accounts

MFA must be active on all email accounts. MFA is critical for security as it makes stealing information more difficult for cybercriminals. By preventing unauthorized access via stolen passwords, MFA ensures other security tools function as intended.

2 Data Backups Implemented

An effective backup solution is essential for quickly resolving cyber breaches through restoration. Backup solutions must:

- Encrypt data at rest.
- Scanned regularly for viruses and malicious data.
- Include immutable backups with secure copies for recovery.

Cloud-based backup solutions are acceptable if they meet these criteria.

3 Data privacy compliance and PHI / PII Encryption *(if regulatory conditions apply)*

If subject to HIPAA or other regulatory standards, customers must comply with all applicable national, state, federal, and regulatory privacy and security policies, including but not limited to PCI, HIPAA, GDPR, and SEC standards.

For Subscribers Regulated Under HIPAA /PCI /SEC / OSHA:

- Complete and document an annual risk assessment.
- Inventory and account for all PHI prior to any incident.
- Ensure all employees have completed HIPAA training within the past 12 months and before any incident.

4 Patch Updates and Maintenance

Software patches and updates must be applied within 60 days of their release. Following a regular patching schedule is considered a best practice to reduce vulnerabilities.

5 Invoice and wire payment changes verified and documented

All out-of-cycle change requests to invoice routing and wire payment details must be properly documented to provide evidence in case of a security breach or attack. Voice verification must be completed, with the time and date of the verification recorded to support potential fund recovery. Only official points of contact should be used for verification, and any contact information provided in out-of-cycle requests must be avoided.

6 Breach Event Log Data Verification

In the event of a breach, log data files must be provided as evidence to support and verify claim requests.

Kaseya Cyber Insurance

Fast Track Program United States

Qualification Requirements

Businesses and clients of MSPs utilizing Kaseya's Security Stack can access discounted cyber liability insurance, while MSPs gain access to professional liability insurance. The following controls are required for qualification:
