

ThreatSync SaaS

Unified Network Security Made Simple

ThreatSync SaaS is an extension of WatchGuard's ThreatSync XDR solution. Managed in the WatchGuard Cloud, it delivers a highly effective Cloud and SaaS application detection and response solution for cybersecurity teams concerned with protecting Cloud environments. Utilizing AI-driven security policies, ThreatSync SaaS delivers a unified view of M365, Azure, Google Workspace, Google Cloud, and AWS Cloud risk and threats prioritized through smart alerts, investigative views, and compliance reports.

Once Cloud risks and threat events are identified, ThreatSync SaaS sends them to ThreatSync Core for remediation, providing a unified orchestration response. Together, they streamline Cloud cybersecurity, enhance visibility, automate response actions across the organization more quickly, reduce risk and cost, and offer greater accuracy.

See Risks and Threats Across Your Cloud Environments

For hybrid network & Cloud operations managers, ThreatSync SaaS offers a comprehensive view of abnormal risky activities across Cloud environments and SaaS applications. This visibility allows managers to swiftly identify at-risk user and admin accounts, Cloud applications, and file activity without overwhelming IT teams.

Detect and Stop Threats, Reduce Dwell Time

ThreatSync SaaS enables automated, continuous monitoring for threats across Cloud platforms and SaaS applications. Utilizing a unique combination of cyber TTP policies, threat intelligence, and AI, it delivers a short, prioritized list of smart alerts and threat reports. Cyber and IT managers can then quickly investigate and remediate cyberattacks 24x7.

Prove Continuous Compliance

ThreatSync SaaS includes hundreds of ISO 27001, NIST 800-53, and Cyber Essentials compliance controls for Cloud platforms and SaaS applications. These control sets are easily activated and have instant visibility to control effectiveness, SLA, and compliance objective tracking. Add WatchGuard Compliance Reporting for prebuilt, automated compliance policies and control-effectiveness reports covering FFIEC, NIST, ISO, NIAC, CMMC, and more.

Upgrade to the ThreatSync Suite

ThreatSync SaaS is fully integrated into the ThreatSync Suite. Upgrading to the Suite expands threat detection coverage to include complete hybrid network and Cloud infrastructures and adds automated compliance reporting – all for one low cost. The ThreatSync Suite includes ThreatSync Core, ThreatSync NDR and SaaS, and WatchGuard Compliance Reporting.

Benefits

- Eliminate reliance on the complex and costly "built-in" Cloud threat detection systems that come with Azure, Google, and AWS.
- Gain unified risk and threat visibility across multiple Cloud platforms and SaaS applications, including M365 and Google Workspaces.
- Reduce the costs of security and compliance of Cloud platforms by automating monitoring, alerting and remediation, and compliance control reporting.
- Deliver out-of-the-box M365 risk and threat reports to prove security hygiene status and improvements.

M365 Threat Visibility

Continuously monitor usage, risks, and threats across M365 SaaS applications including Office, Teams, OneDrive, and SharePoint. Using AI-driven threat modeling, easily identify and mitigate behaviors and activities that lead to compromised accounts, application-based attacks, and sensitive data loss.

Key Features

Enterprise AI-driven accuracy in detecting attacks operating inside your Cloud workspaces, including:

- Brute Password Attack
- Privileged Account Attack
- Privileged Account Escalations
- Account Compromise
- Lateral Movement
- Sensitive File Theft
- File Exfiltration Staging
- Data Exfiltration
- Insider Threats
- Rogue/Impossible User Behaviors

Out-of-the-box NIST and ISO policy-based, AI-powered control frameworks support and continuous compliance monitoring.

ThreatSync SaaS supports Azure, M365, Active Directory Cloud, Google, Google Workspaces, and AWS platforms. This cross-platform support enables the coordination and automation of multiple processes and tools with security orchestration, providing a cohesive security posture.

ThreatSync and ThreatSync SaaS Deliver Affordable, Expansive, and Unified Threat Detection and Response
